400 series
flexible container handling systems
400 series

The 400 Series from TREPKO is a range of servo driven flexible container handling systems that offer themselves to a wide variety of filling & sealing applications. This flexible machine series can handle a considerable variety of packaging types including troublesome parallel sided containers. Recent developments in the series include applications to seal cardboard sandwich packaging, plastic alcoholic beverages and high speed filling lines for the salads industry.

All TREPKO servo conveyors are designed to minimise the number of change parts required between packaging changeover's and therefore maximising production time & output. To achieve long term flexibility, on the whole lines are built in a modular format enabling additional assemblies to be added when demand necessitates.

The servo machines from TREPKO rely on a fully stainless steel construction which is combined with modern drive systems for a smooth and reliable operation.
Design Example

Options

- Container Dispense Module
- Bulk Container Loading Assemblies
- Filling Track Sections
- Volumetric Filling Systems, (with standard Trepko Options CIP etc.)
- Sealing Systems – both pre-cut and seal from roll stock
- Clip on Over-Lid Assemblies
- Bulk Clip on Over-lidding Assemblies
- Recipe Screening function to allow instant push of the button product changes
- Single or Twin Index Profiles
- Modern Connection

Typical Applications

- Bulk Salads Line
- Multi-fill desserts
- High Speed Filling Lines
- Vodka Shots
- Contact Lenses
- Sandwich Systems
