9100 series
forming, filling and sealing machines
Trepko’s 9100 Series offers a competitive Forming, Filling and Sealing solution for liquid, semi-liquid and pasty food products. The machines have been designed to meet customer demand, whereby the series offer a flexible, compact, hygienic, economical and easy-to-use system.

Maximized Output - Minimized Floorspace
The machines achieve outputs from 3,000 up to 50,000 cups per hour, while at the same time keeping the floor space requirements at an absolute minimum. This makes the machines of the 9100 series the most compact solution on the market.

Flexibility
The 9100 Series enable full flexibility and meet the most demanding requirements of the marketing department. A complex sequential cutting tool allows for immediate changeover between any cluster pattern by a simple touch of a button. Furthermore, product complexity and easy product change is enabled by wheel-in-wheel-out filling stations. The standard version is prepared for having 4 filling stations connected at the same time, thereby enabling the filing of up to 4 different flavours in each cluster pack.

Hygiene
The standard version offers an excellent hygienic design, in which all pneumatic valves and electrical components are kept in the top section of the machine leaving the entire bottom section open and easy cleanable. In addition, the machines can be upgraded to Ultra Clean or even Aseptic version.

Easy operation
All machines are equipped with a HMI touch screen which combined with servo technology and a recipe handling system, allows easy control of functions and setpoints for changeover between any cluster pattern, cup depth, product and packaging material.

Integration with End of Line Solutions
The 9100 Series of machines are designed for integration with TREPKO’s End of Line Solutions (700 Series).
