

# ASEPTIC PACKAGING MACHINERY FOR CUPS

During Anuga Foodtec 2015, we had the excitement of unveiling our latest technology; The TREPKO Aseptic In-Line Filling and Packing Machines.

Since its reveal, our aseptic technology has generated tremendous interest. So much that we have already earned multiple contracts for aseptic machines across the globe including a large, very reputable dairy in Germany.

Our customers are attracted to the coupling of the aseptic concept, the 3-A standards (being the worlds most thorough hygienic standard) and Trepko's already industry leading performance and reliability.

We are off to a great start for 2015 and anticipate an even greater rest of the year. Contact your local sales representative to be a part of the excitement!

Please contact your local sales representative for more information!
