200 series

rotary machines for filling and closing pre-formed containers
200 series - a flexible choice

Unique offer
The 200 Series is available in four frame sizes with various numbers of lanes. The choice of a model and number of lanes depends on three key factors:
- required output;
- size and type of packaging;
- requirements for additional equipment.
The 200 Series can achieve outputs from 2,400 up to 14,000 cups/hour across a large range of product types. Even the most complex projects and the most sophisticated ideas are feasible with the 200 Series machines.

Flexibility
The flexibility of the 200 Series with its quick and simple changeover procedures allow for using both traditional as well as new and innovative packaging designs. Reliability of these machines enables highly efficient production. The 200 Series provides a number of solutions within the following fields:
- dosing of different product types,
- quick change-over to alternative packaging,
- different methods of container closing.
All the features of the 200 Series make these machines ideal for development of new product concepts in different market areas.

Hygiene of the packaging process
The 200 Series machines meet stringent hygiene standards which are common within the different fields of the food industry. The robust construction materials used in the 200 Series guarantee a long machine life in severe operating production environments. Hygienic standards can be enhanced by using additional solutions, for example air filtration of the product area and decontamination of packaging. The availability of our hygienic options depend on the number of lanes, cup size and machine configuration.

Quality and safety at the highest level
The design and construction of the 200 Series machines guarantee safety at all three basic levels: operator’s safety, machine’s protection and product/packaging material savings. All the required international and local safety standards are fulfilled, including CE.

Ease of operation and maintenance
The 200 Series have recipe screen functionality. Trepko has designed a control system which provides simple and quick access to recipes assigned to a given product and container volume.

After Sale Service
- training for operators and maintenance engineers,
- professional and easily accessible service,
- fast and efficient delivery of spare parts designed and produced by TREPKO or components from trusted and reliable suppliers.

Integration with End of Line Solutions (700 series)
TREPKO offers a comprehensive range of End of Line solutions which can be integrated with the 200 Series.

SPECIFICATIONS

- Number of lanes: 1-6
- Number of lanes and maximum output (for a Ø95 mm cup): 4 lanes, 9,600 cups/h
- Power supply: 3 × 400 V + PE + N
- Compressed air pressure: 6 bar
240 MODEL

SPECIFICATIONS

- Number of lanes: 1-6
- Number of lanes and maximum output (for a Ø95 mm cup): 6 lanes, 14,000 cups/h
- Power supply: 3 x 400 V + PE + N
- Compressed air pressure: 6 bar
